

FiTech ***Fuel Injection***

NEW PRODUCT RELEASE:

Power Adder EFI Kits In Bright Aluminum

Want your boosted or nitrous-fed engine to look as good as it performs? Our Power Adder TBI Systems are now available in Bright Aluminum for a show quality finish with race-winning performance.

Three Go EFI Systems, the 600 HP, 1,200 HP, and the 2x4 1,200 HP Systems are designed to support forced induction systems and support up to 21.7 lbs. of boost as well as a single stage of wet nitrous. Superchargers, turbos, or even a roots-style blower can all be calibrated easily to improve the drivability for cruising and the performance on the track.

The air/fuel ratio is monitored and adjusted with FiTech's fast reacting self-learning technology, plus the ignition timing can be controlled based on boost or nitrous (including a retard feature). Most of the settings can be controlled through the touch-screen handheld monitor, but this system also comes with Pro-Tuning software to run on a laptop for even more specific mapping and tuning.

The durable bright aluminum finish delivers the show and go for serious power. The system is supplied with a color touchscreen monitor, WB02 sensor, internal 3-BAR MAP Sensor, bung kit, coolant sensor, gasket, Pro-tuning laptop software and mini USB cable.

Bright Aluminum Finish, Power Adder TBI Systems
